

8 channel Temperature Data logger for
thermocoupler, 20mS sampling time, 16-bit, 8MB of
memory, battery power, WiFi, USB

FEATURES

- 8 channel data logger about Wifi, USB, RS232
- 16-bit A / D converter in data logger failed
- With cold-junction temperature compensation to 8 Megabyte memory to log data
- Wifi, USB and RS232 automatic baud rate up to 115.2kbit
- Battery operation - 12 year battery
- , if you acquire: Software for configuration export, plotting, analysis and reporting (not included)
- Configurable alarm controls
- measurement speed from 20 milliseconds (1 channel) to 12 hours
- Robust aluminum housing
- coated printed circuit boards for protection against moisture, corrosion
- Dimensions: 88 x 65 x 24mm
- Weight: 200 grams
